

Sanitation 360

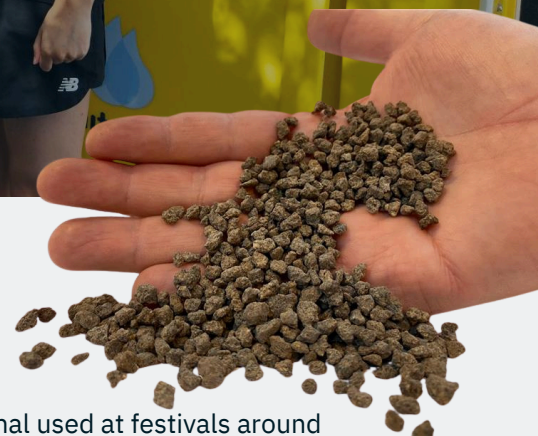

The Kissamaja

Recycling nutrients!

We have been pioneers of circular bathrooms and fertilizers since 2019. Join us in updating the toilet to meet the climate challenges of the 21st century!

A smart alternative for a circular & eco-friendly society

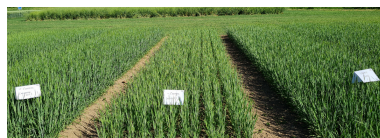

The *Kissamaja* was launched in 2025 and is a compact, odourless unisex urinal used at festivals around Sweden. The urine is stabilised directly in the *Kissamaja* and transported to Sanitation360's facilities for drying and granulation. The result is *Granurin*, a hygienised fertiliser rich in nitrogen. The dry, granulated fertiliser can be used by farmers to grow all kinds of food, promoting a circular food system.

Loved at festivals

Women are delighted with the shorter queues, and everyone comments how fresh they are.

- ✓ Valborg in Uppsala 2025
- ✓ Malmö Festival 2025
- ✓ Medieval Week 2025

Fertiliser used for food production

Used to grow Swedish grain, which has in turn been tested by consumers.

- ✓ Health-safe/nonhazardous
- ✓ Does not impact taste
- ✓ Circular and sustainable

Our needs:

To scale up fertiliser production, we require additional urine supply, which necessitates further capital to build more *Kissamaja* units and Sanitation360 facilities.

- ✓ Toilet rental partnerships
- ✓ Build more Kissamajas
- ✓ Attend more festivals
- ✓ New fertiliser production facilities
